

MARINE DIESEL ENGINES

PLEASURE-CRAFT POWER

6CX-GTE
342kW (465hp)

YANMAR

A Powerful New Force in Motorboating

- This is Yanmar's motor boat diesel engine that gives a total of 465 x 2 or 930hp (684kW) in a twin installation. It is aimed at the high volume twin diesel propulsion market from around 32 to 42 feet.

- Featuring Yanmar's latest lightweight engine construction technology in a compact package, this power plant exhibits superb fuel efficiency and a power-to-weight ratio that makes possible a higher top speed and a longer cruising range using the same fuel tank.

- The increased horsepower in this straight 6 cylinder engine is obtained from a longer stroke, also from more aggressive turbo/intercooler and tune settings. It also features 4 valves per cylinder and an extra high pressure fuel injection system.

- Dimensions of 905mm (35.63in) high and 824mm (32.44in) wide, and with only 825kg of engine weight make for a power installation that is lightweight indeed (1815lbs.).

- We expect the smooth power, together with the flat torque characteristics and low fuel consumption figures of the 6CX-GTE will make it an outstanding choice for any fast boat.
